There were grounds for supposing that if an expanding nodule of disentangled space and time were introduced arbitrarily through some mechanism'-pictured by some people as a bubble appearing in soda water, although this wasn't really accurate.-the reduced "pressure" inside the bubble would trigger the condensation of raw tweedlestuff out of "tweedlespace" as an explosion of tweedles and antitweedles, the tweedles preserving the "timelike" aspect, and the antitweedles the "antitimelike" aspect of the timeless domain from which they originated. Their mutual affinity would precipitate their combination into a dense photon fluid in which timelessness became reestablished, which tied in with Relativity by explaining why time stood still, for moving photons and accounting for the strange connection in the perceived universe between the rate at which time flowed and the speed of light. The high-energy conditions of the Primordial photon fluid, the density of which would have approximated that of the atomic nucleus, would favor the formation of "tweeplet" entities to give rise to matter interacting under conditions dominated by the strong nuclear force, which manifested itself to restore nonAbelian gauge symmetry with respect to the variance introduced by the separation of space and time. Bernard turned to stare out of the window and think. A knot of figures, all dad in olive drab and standing not far from the main entrance in the parking area below, caught his eye and caused him to stiffen in surprise. They were wearing uniforms---U.S. Army uniforms. Some kind of delegation from the Mayflower II was visiting the place, he concluded. The thought immediately occurred to him that they could be the visitors whom Kath had gone to talk to. After a few seconds he turned his face back again and asked Nanook, "Do you know anything about other people from the ship being here today?".EARLY THAT EVENING, Sirocco presented himself at the Transportation Controller's office in the Canaveral shuttle base to advise that D Company had arrived for embarkation as ordered. Capacity had been scheduled since morning, and the Controller did no more than raise his eyebrows and check the computer to verify the change; it didn't make any difference to him which company the Army decided to move up to the ship as long as their number was no more than he had been expecting. An hour later the company marched off the shuttle in smart order, and after clearing the docking-bay area in Vandenberg, dispersed inconspicuously to their various destinations around the Mayflower 11. "Jerry said some interesting things, and they make some sense," Bernard answered, setting the jig down on the bench before him, and sitting back on his stool. '~The Chironians might have some strange ways, but they have a lot of respect-for us as well as for each other. That's not such a bad way for people to be. Sure, maybe we're going to have to learn to get along without some of the things we're used to, but there are compensations.". "Looks like it," Sirocco agreed. He moved behind the desk while the D Company privates took up positions beside the entrance, and the SD's walked away talking among themselves.. "Were I what?". "We're not negotiating, Sherlock.". "Her mother's dying too," Jay had replied dryly. Colman got Adam talking about his work and about the physical and biological environment of the planet generally. Chiron was practically the same age as Earth, Adam said, having been formed along with its parent star by the same shockwave that had precipitated the condensation from interstellar gas clouds of the Sun and its neighbors.

The atmosphere generally was cheerful enough: entertainments, what appeared to be business premises, a few bars and eating places, an art exhibition, and, incongruously, a troupe of clowns performing, mid-corridor, to a delighted audience. Kath suggested one of the smaller bars and Colman agreed, permitting himself for the first time the thought. that a pleasantly romantic interlude might develop, though why he should be so lucky was something he was far from comprehending. "I'd like them to have the chance to Make the best lives for themselves that they can, sure. They've got that chance right here. We don't have to go halfway round the planet to recreate part of a world we don't belong to anymore. It couldn't last. That's all over now. You have to bring yourself to face up to it, hon." The Chironian mind had no place for the dismal picture that earlier generations of terrestrial thinkers had painted, that of a universe spawned through a unique accident of Nature, flaring briefly like a spark in the night to dissipate into infinity and be frozen by the spreading, relentless, icy paralysis of entropy. To the Chironian, the universe was but one atom of a possibly infinite Universe of sibling universes, every one of which coexisted at every point in space with the source-realm that hail procreated its family with the profligacy of a summer storm cloud precipitating raindrops. Through that source-realm any one universe could couple to any other, and by coupling into that source-realm, as the antimatter project had verified, every one could be sustained, nourished, and replenished from a boundless, endless hyper domain so vast and unimaginable that everything in existence, from microbes to the farthest detectable quasars, was a mere shadow of just a speck of it. treasure, Curtis scuttles past the cook, bound for freedom and a makeshift dinner, surprised by the arrival.
